# A TOUCH OF A BUTTON:

## how One Touch Automation creates unique, fully-automated homes

BY **JAMIE FISCHER** PHOTOS **LISA LANDRIE**

Calvin Garraway spent years in the audio-visual industry before starting One Touch Automation. Given his previous experience in the industry, as well as training as an electronic systems engineer, the natural transition was a success, and One Touch has been growing every since.

In just three short years, Calvin and his team have completed over 400 contracts

in the Saskatoon area. "Every job we do is unique," says Calvin. The custom nature of the audio-visual automation has kept Calvin and his technicians on their toes and has ensured that they're always keeping up with the latest technology.

Given the endless options available for home automation, the team at One Touch Automation is always ready to use their creativity to design and install a system that's right for their customers.

At One Touch Automation, they offer everything from custom home theatres to fully automated home systems including lighting and temperature control, security, and much more.

All of their work is custom designed by Calvin himself. There are no limitations to their designs, and One Touch Automation works closely with each client to ensure their system is unique and specialized to their needs.

With an automation system by One Touch Automation, clients get fully functional home theatres without the design headache of tangled wires. All of One Touch Automation's work is done to show quality. This means home automation systems are not only convenient, but they contribute to the functionality and interior beauty of your home.

With hundreds of products available for audio visual equipment, One Touch Automation insists on only working with the best. Crestron specializes in top of the line electronic systems, and has high profile clients across the world, including Microsoft and the U.S. Pentagon. While Crestron is capable of serving some of the world's largest corporations, it's also used to create great home automation systems. In order to carry this esteemed

corporate and residential line, One Touch Automation enrolled in a vigorous training program, and their work must continue to meet the company's high standards.

Whether they're working with home builders or private owners, Calvin and his technicians take pride in their relationships with their clients. When working directly with clients during a new build or renovation, Calvin says it's important to always understand that the job site is also someone's home. "We're very careful in our work, and we make sure we get our jobs done in a timely fashion so our clients can have their homes disturbed as little as necessary," says Calvin.

One Touch Automation works with a variety of homebuilders in the Saskatoon area. They offer special homebuilder

incentive prices, ensuring their work always meets the builder's standards for quality and aesthetics.

One Touch Automation stands out from the crowd because each technician is highly trained, educated and has the ability to offer a high quality standard of service.

To see how Calvin and the professionals at One Touch Automation can help you with all of your audio visual automation needs, visit their office at 1308 8th Street East, or online at [www.saskautomation.com](http://www.saskautomation.com), or give them a call at 281-7282. FHS
